

Step 1 - Plug your Wifi router into a power outlet.

Step 2 - Plug your Wifi router into any available LAN port on your existing router or modem. 

Step 3 - Offer free wifi to your guests. To log onto the wifi they connect via "Free Wifi" or name of your choosing.

Step 4 - Once you are online we will get your administrator login credentials to you as soon as possible. Please allow up to 12-72 hours to receive dashboard login credentials.

Your existing router/modem should look something like the above photo. Plug your router Wifi system into any of the LAN ports. If you don't have an available LAN port just give our team a call. We can fix this. The ethernet cord in the Router must be inserted into the "blue" port.

FAQ's

Will this affect my current wifi setup?

No, our Wifi opens up a new wifi network. Your current systems will remain unchanged.

What data is the system collecting?

Depends on how the user logs on. A typical facebook login will gather their basic profile information such as name, email, profile picture, gender, and more.

What are data bandwidth limits?

We have the option to limit bandwidth so not one person can consume all data available at your establishment affecting the speed for your other customers.

Are you sending out marketing material to my customers?

No, we will never send anything to your customers without your permission.

What if I have multiple locations?

Contact **Mobile App Starter**. We offer discounts, and custom reports for customers with more than one location.

Can I update the splash page or updating my branding?

Absolutely, we can make any splash page customizable to look, feel, and represent your brand properly.

What is a typical Wifi marketing campaign?

All campaigns are customizable for your business. A typical campaign would include messages to first time customers, frequent customers, and missing customers. We also have the opportunity to send holiday messages and more to your guests. Once we have collected a little data from your customers we will get you started asap.
